- Available in all countries in Africa

A person with long, wavy brown hair, wearing a dark green jacket over a striped shirt, stands in a room. The room is decorated with numerous strings of colorful Christmas lights (red, green, blue, yellow, and white) hanging from the ceiling and draped across the space. The person is looking upwards and to the right with a concerned or curious expression. The background shows a window with white curtains and a bookshelf filled with books and other items.

DETAILS

streaming = data plane = Open Connect

A movie poster for the Netflix original 'Open Connect'. The central focus is a large, close-up face of a young boy with a serious expression. Surrounding him are other cast members: a woman with brown hair, a man in a fedora holding a walkie-talkie, and several children. In the background, three children ride bicycles with their headlights on, approaching a fenced area. A sign on the fence reads 'RESTRICTED AREA' and 'NO TRESPASSING U.S. GOVERNMENT PROPERTY'. A glowing figure is visible behind the fence. The scene is set at night under a starry sky. The title 'Open Connect' is written in large red letters across the bottom, and 'A NETFLIX ORIGINAL' is written in white below it.

Open Connect

A NETFLIX
ORIGINAL

Q: What is a Content Delivery Network?

A: Geographically distributed content servers attached to
networks
+
a way of routing requests to the closest (and/or best
performing)
server / network path

Hardware

Open

Connect

Appliances

“Storage” appliance

Designed for bulk storage of the entire large regional content catalogs

“Flash” or “Offload” appliance

High-throughput servers, used to serve very popular content

Open Connect

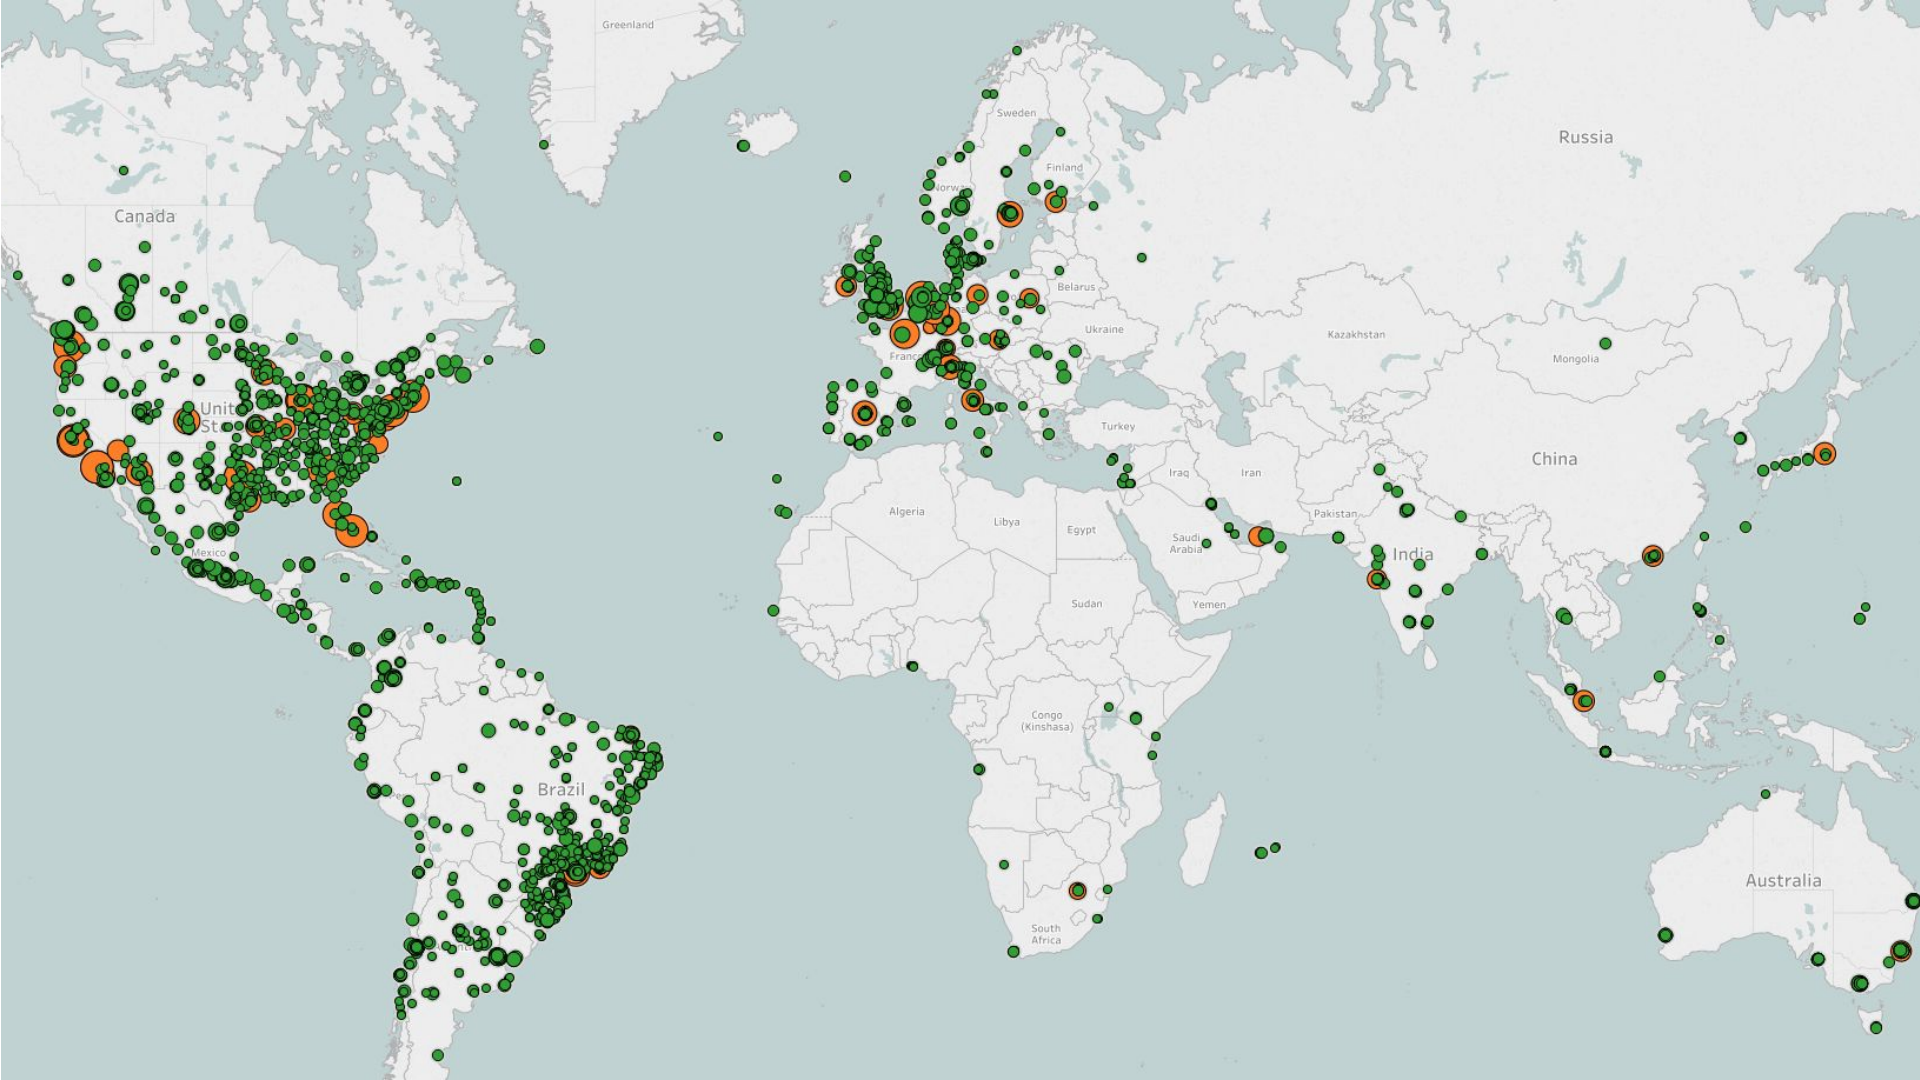

connects directly to
residential ISP networks.
95% of our traffic is directly
connected.

- MED
- eBGP over iBGP
- Router ID
- Age
- Geo

Our
Default

Preferences

1. Embedded
2. PNI peering
3. Public peering

1. Prefixes are collected from Open Connect Servers - both those that are present at our POPs and embedded servers
2. Open Connect Servers belong to AS 40027
3. Netflix peering are with AS 2906

The same prefix announced both to a private or public peering session (using AS2906) and to an OCA (using AS40027) will always be preferred on the appliance over peering, because the Open Connect control plane will have two BGP entries for that prefix:

- one with an AS PATH LENGTH of 1 (<AS_NUMBER>) from the appliance itself
- one with an AS PATH LENGTH of 2 (2906 <AS_NUMBER>) from an IX location

When OCAs and Open Connect SFI peering is combined, OCAs are nominal and peering is used primarily for backup, for filling, and for serving long-tail titles.

We use MED to boost the preference of the embedded OCAs and to prefer Private Interconnections over Public peering.

- We do not add MED on prefixes learnt from an OCA
- We **add** MED 50 to the existing MED for prefixes learnt on a private peering
- We **add** MED 100 to the existing MED for prefixes learnt on a public peering.

OCA:

med=0

as_path ISP_ASN

NAP:

med=100

as_path 2906 ISP_ASN

PNI:

med=50

as_path 2906 ISP-ASN

You can
implement
your
preferences by
using BGP

Examples

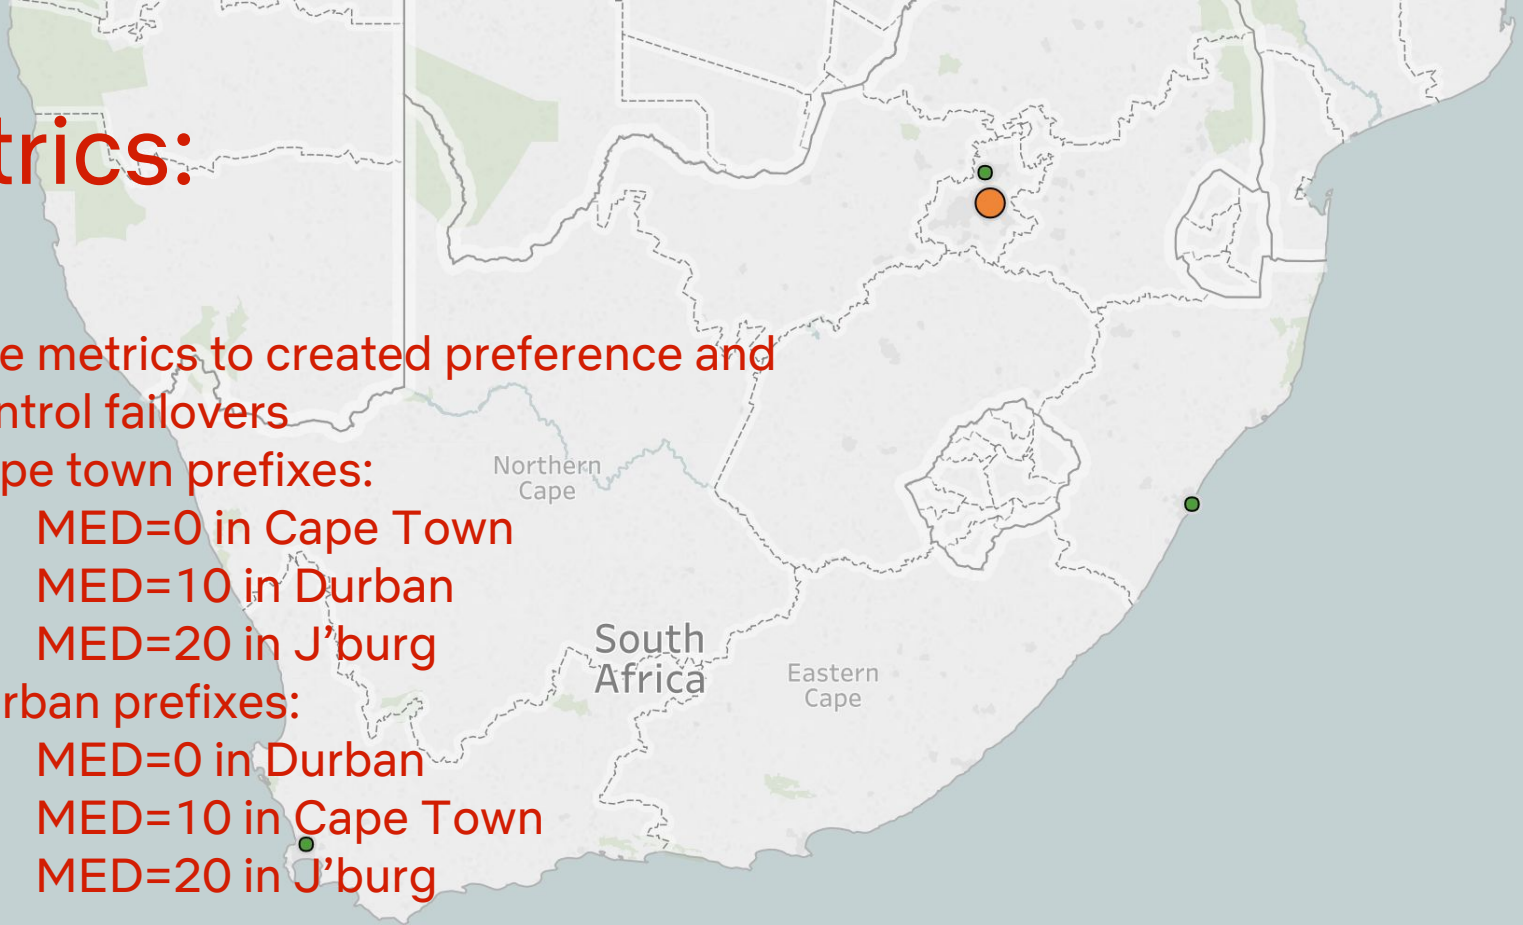

Geolocation:

- Clients will be directed to the geographically closest green dot

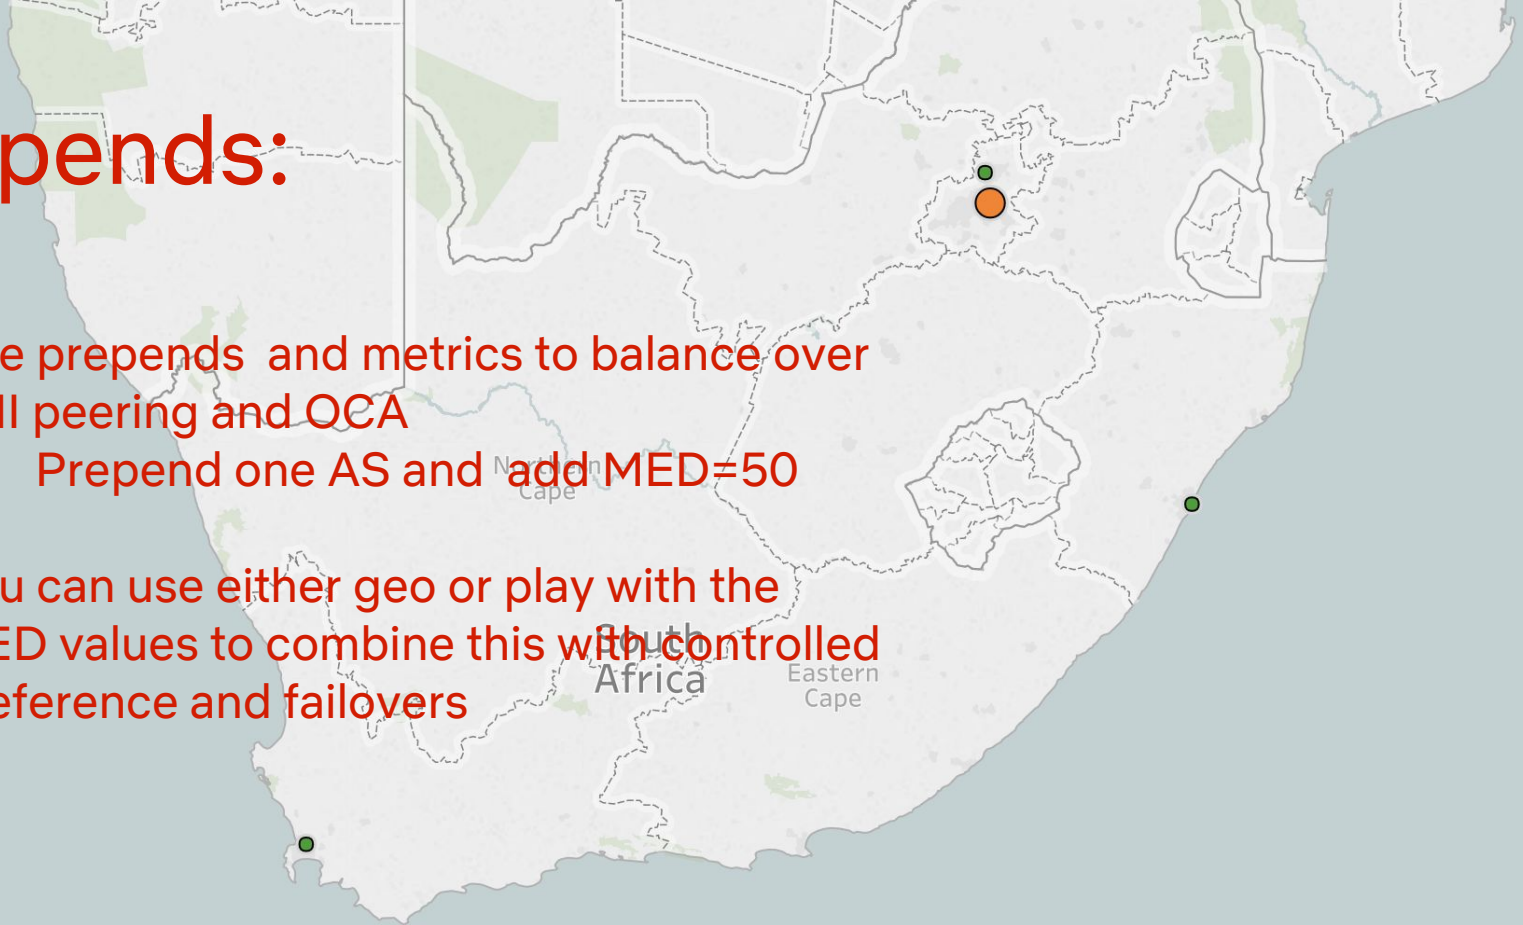

Metrics:

- Use metrics to create preference and control failovers
- Cape town prefixes:
 - MED=0 in Cape Town
 - MED=10 in Durban
 - MED=20 in J'burg
- Durban prefixes:
 - MED=0 in Durban
 - MED=10 in Cape Town
 - MED=20 in J'burg
- ...

Prepends:

- Use prepends and metrics to balance over PNI peering and OCA
 - Prepend one AS and add MED=50
- You can use either geo or play with the MED values to combine this with controlled preference and failovers

A map of Africa and the Middle East with various countries labeled: Algeria, Libya, Egypt, Saudi Arabia, Iraq, Iran, Pakistan, India, Sudan, Yemen, Congo (Kinshasa), and South Africa. Numerous green dots are scattered across the map, representing peering locations. Two dots in the Persian Gulf region (near Oman/UAE) and one dot in India are highlighted with orange outlines. Two dots in South Africa are also highlighted with orange outlines.

Peering:

- Peering with Netflix AS2906 at NAPAfrica in Johannesburg, but the traffic is still on my upstream?
 - Prepend at least 2 ASN
 - deaggregate on 2906 peering (up to /24)
